

# CNC-2000

## MORE INFORMATION

# UPDATE

DEC 2004

CNC 2000 is designed and developed by a team of qualified engineers having more 12 years experience in CNC technology. It is covered with all the topics related to CNC technology to take care of CNC education. It is targeted to be used by Engineering Industry, Colleges, Polytechnics, I.T.I s and various Pvt. educational institutes for learning and using CNC technology

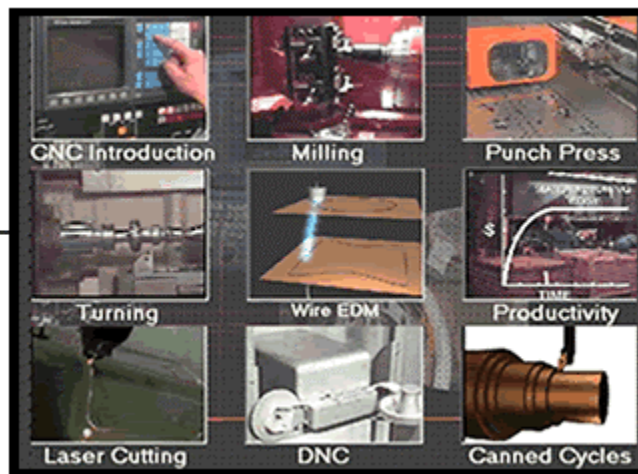

## CNC KEYBOARD SIMULATOR

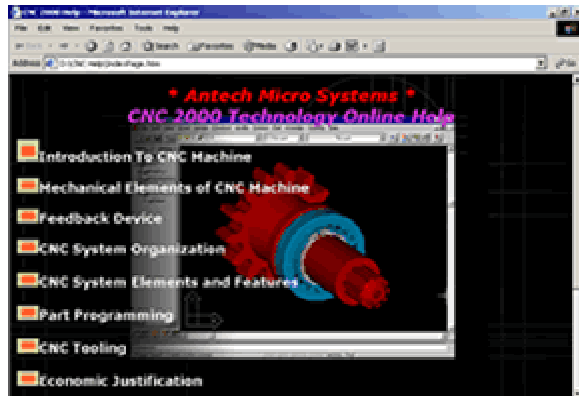

This unique feature of CNC 2000 allows user to enter NC program as if he is making on CNC. Entire CNC keyboard is simulated on PC screen. This will be very useful to learn CNC keyboard operation.

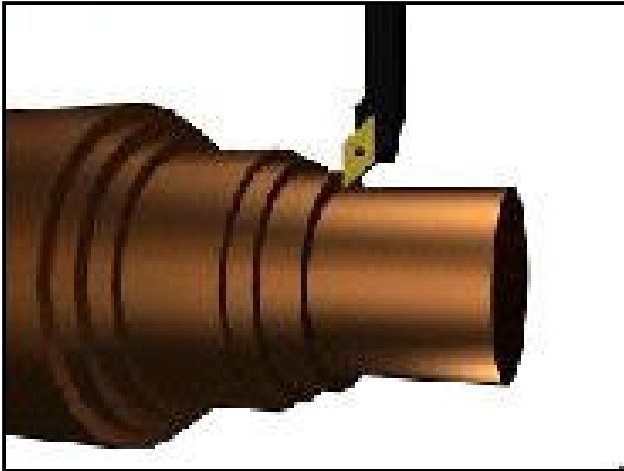

CNC 2000 has nos of video clips to understand CNC, G-M codes

CNC 2000 has detailed write up on various topics in CNC.  
Few of them are....

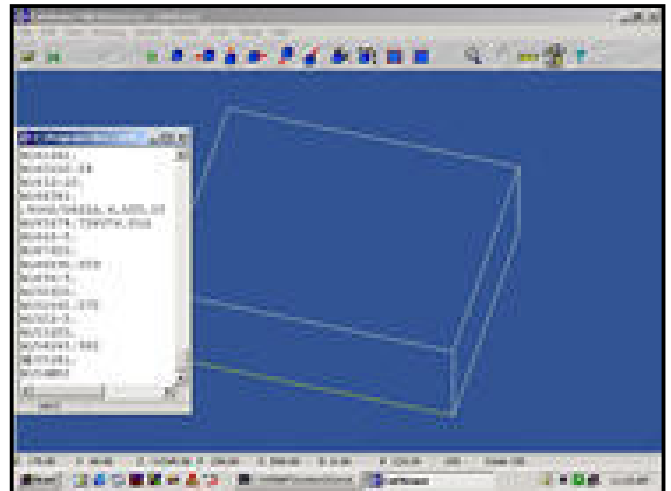

### TURNING SIUMLATOR

CNC 2000 has turning simulator which allows user to enter NC program using G/M codes & checks its syntax & simulates on PC screen. This covers all the cycles available with CNC. This gives, user a better environment for making efficient NC program. It has built in time estimation facility, as well.

### MILLING-SIMULATOR

CNC 2000 has milling simulator which simulates CNC milling NC programming in 3D solid models. This covers all G/M codes including cycles. It has time estimation module as well. This can be used by NC program to make efficient CNC mill program. This module can even simulate CNC code prepared by CAD/CAM.
